OUTSTANDING Ofsted Outstanding Provider

Fareham College's Civil Engineering Training Centre (CETC) campus located in Lee-on-the-Solent offers industry-focused Apprenticeship programmes and professional training courses to develop the next generation of civil engineers and groundworkers.

This award-winning training facility is home to a busy and energetic campus, with constant activity taking place as apprentices learn the essentials of the trade from laying foundations, mixing and pouring concrete and laying drainage, to practising brickwork techniques, using surveying and levelling equipment and driving forward-tipping dumpers and ride-on rollers. It is fully equipped with the machinery, tools, materials and resources needed to ensure all learners develop work-ready skills or further develop their careers.

At our CETC Campus we offer the pioneering Civil Engineering & Groundworks Apprenticeship programme (CEGA). This has been developed in conjunction with some of the south's major construction employers in response to a regional skills shortage that is limiting civil engineering growth and expansion in the area. The Apprenticeship programme enables participants to develop the relevant skills and obtain the appropriate licences required to work on a variety of construction sites and be paid a competitive wage while gaining a recognised qualification. We offer specialist apprenticeship training in areas including:

- Groundworks
- Civil Engineering
- Highways Maintenance
- Plant Operations
- Rail Maintenance.

For more information or to apply for the Level 2 Civil Engineering and Groundworks Apprenticeship starting this September, please visit fareham.ac.uk/cetc
